EXPLANATION.

These tables give the net amount (for billing) at all prices and discounts in common use on all quantities up to ten books, and on the other quantities that are frequently used, and as each result is worked out to five decimals the net amount on any number of books up to 10,000, in even tens, hundreds, and thousands, can be obtained by moving the decimal point.

The net amount on any number of books can be found by adding the results for the odd copies and the even tens, hundreds and thousands. In actual work it will seldom be necessary to perform an addition, as the tables cover the quantities usually found on orders.

Thus the net amount on eight books at \$1.25 each, less a discount of 25 and 5 per cent., is \$7.125, the net amount on eighty books, \$71.25, and on 800 books, \$712.50.

The net amount on any number of books at a price not given in the tables, but which is one tenth of or ten times greater than one of the prices in the tables, can be found by simply moving the decimal point.

Thus the net amount (as per tables) on eight books at \$.20 each, less a discount of 25 and 5 per cent., is \$1.14, and the net amount on eight books at \$.02 each is \$0.114, and on eighty books at \$.02 each, \$1.14.

The net amount (as per tables) on eight books at \$1.25 each, less a discount of 25 and 5 per cent., is \$7.125, and the net amount on eighty books at \$12.50 each is \$71.25, and on eighty books at \$12.50 each, \$712.50.

Example: To find the net amount on eighty-five books at \$1.25 each, less a discount of 25 and 5 per cent.:

80.....	71.25
5.....	4.453
Result.	<u>\$75.703</u>

Example: To find the net amount on eighty-five books at \$12.50 each, less a discount of 25 and 5 per cent.:

Turn to the \$1.25 table.

80.....	712.50
5.....	44.531
Result.....	<u>\$757.031</u>

Each page is complete in itself and can be turned to instantly by the aid of the indented index.
